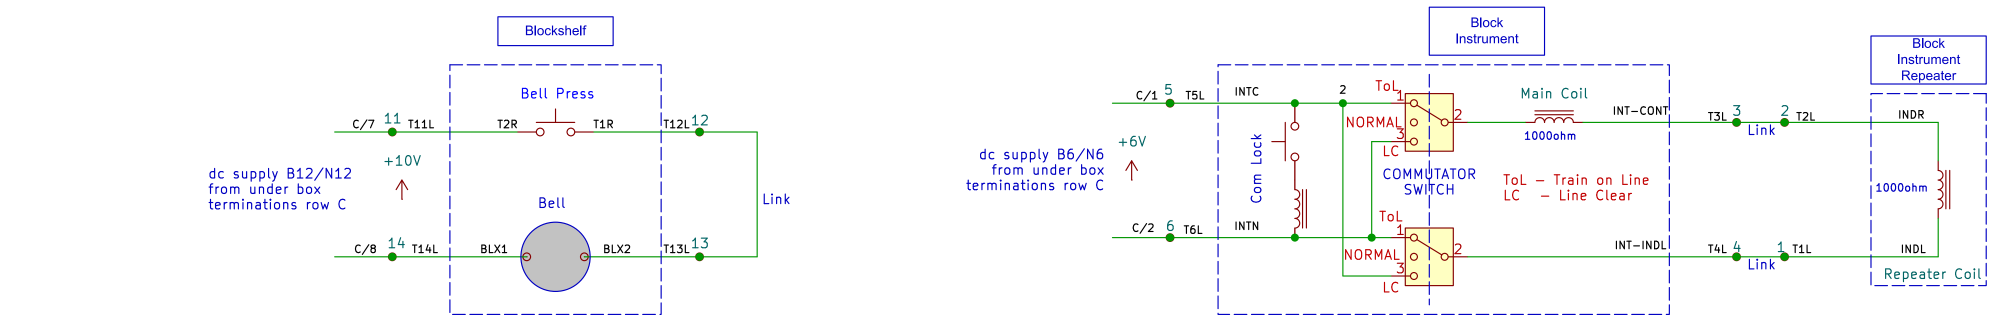
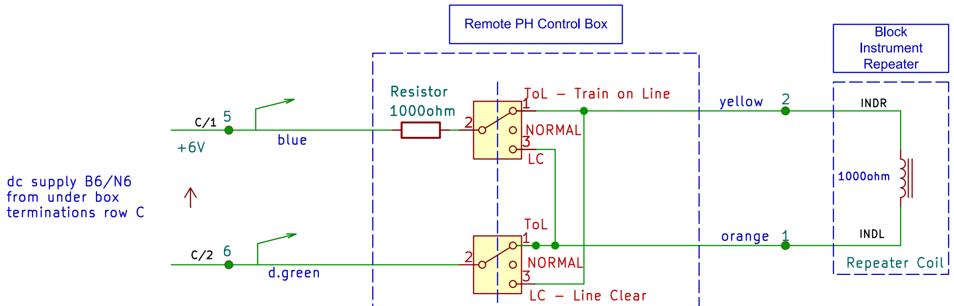
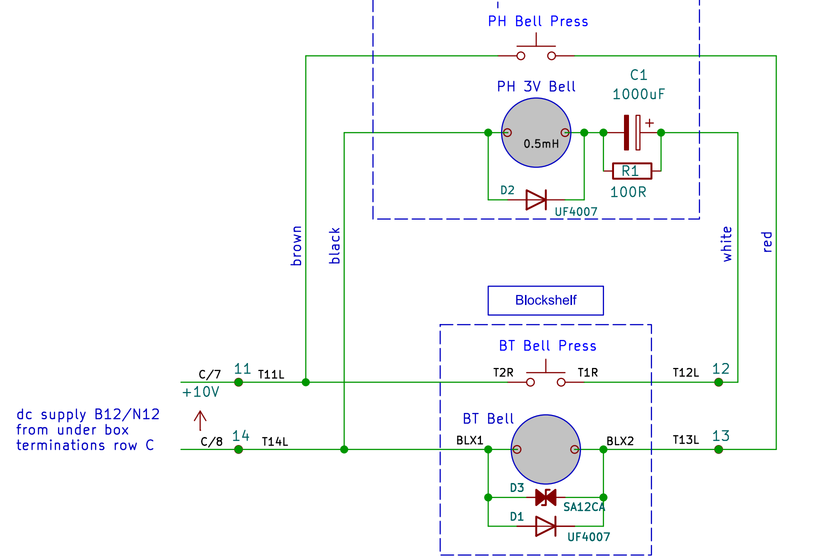
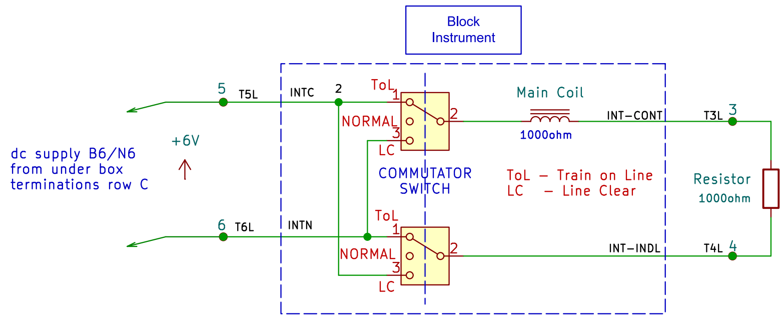
# ORIGINAL BLOCKSHELF DIAGRAM



# MODIFIED BLOCKSHELF DIAGRAM







**Block Shelf - Rear Terminal Strip**

| Terminal | Conn.LHS | Conn.RHS |
|---|---|---|
| | | |
| 1 | T1L + orange | |
| 2 | T2L + yellow | |
| 3 | T3L | 1k resistor top |
| 4 | T4L | 1k resistor btm |
| 5 | T5L + blue | C/1 |
| 6 | T6L + d.green | C/2 |
| 7 | unmarked | C/3 |
| 8 | unmarked | C/4 |
| 9 | unmarked | C/5 |
| 10 | spare | C/6 |
| 11 | T11L + brown | C/7 |
| 12 | T12L + white | |
| 13 | T13L + red | |
| 14 | T14L + black | C/8 |
| rows 15-48 | - see Blockshelf Terminations (1) drawing | |

**PH Control Box - Internal Terminal Strip**

| Terminal | Colour | Description |
|---|---|---|
| | (multicore) | |
| 1 | brown | bell press |
| 2 | red | bell press |
| 3 | orange | block inst. switch |
| 4 | yellow | block inst. switch |
| 5 | d.green | block inst. switch |
| 6 | blue | block inst. switch |
| 7 | black | bell 0V |
| 8 | white | bell + |

**Notes**

1. Terminal numbers (in green) refer to right hand (black) terminal strip on back of blockshelf, shown on drawing Blockshelf Terminations (1), left column
2. 6V and 10V supply do not share a common 0V
3. 10V supply derived from 12V using a series resistor
4. To revert to original wiring, remove all new wiring and 1000ohm resistor, and replace links: terminals 2,3 and terminals 1,4 on rear blockshelf terminal block (C cable, black terminals, shown on drawing Blockshelf Terminations (1))
